19/4/25	Moho Life Tips. Moho-bits 🍿 Read in conjunction with the Moho-bits Website.	Apr 25
Camping	Motorhome Camping: In the public's eyes you represent the whole of the motorhoming community. So, never leave a mess	
Etiquette.	and always try to leave the area tidier than before. Also, be considerate to others, as any complaints will usually end up with the local council or operator - ending up with site closure more often than not.	
	Spend some money locally and make sure the locals know who's spending it! Support CAMpRAit is the future!	
Vehicle 1	Whatever internal security you have, always draw the blinds (so thieves can't come tooled-up).	
2	Wash your own roof (if you are able). This will give you advance warning of any joint problems.	
3	Park with a slope to prevent roof puddling.	
5	Camping in winter, select 'air recirculation' in the cab. This stops cold draughts from the dash vents.	
6	Never take a road that has grass down the middle! Always carry snowsocks in winter (they are lightweight, easy to use and really work!).	
7	Always have more than one security device.	
8	Take your spare wheel off once a year and oil the mechanism. Check the pressure regularly.	
9	Check that jack and brace kit are right for your vehicle and practice how to use them. Try fitting the towing eye. Cold starting a diesel engine - always wait until the glowplug light has gone out. (This might save your airbag ECU).	
11	Always give your vehicle a 20 mile run every 2 weeks (this keeps the vehicle aired and running freely).	
12	Give your A/C a 10 min run every trip (it will last longer as this lubricate the seals).	
13	Always have a jump starter pack onboard for emergencies.	
14	Steep hill starts - set off on full lock. This reduces the stress on the clutch and drive components. Carry a comprehensive set of spares (See Moho-bits website).	
16	Lock the cab doors with the seatbelts for extra security when camping (See Moho-bits website for details)	
17	Jumpstarting vehicle to vehicle can cause very costly damage if done wrong. Never make/brake a connection with engines on.	
18	Never buy a vehicle without a spare wheel (the substitute inflator kits are not viable). Check the tyre valves. Make sure they are metal (the rubber type will not stand the higher pressures involved.)	
20	Tyre Pressures: Ignore the vehicle doorplate. Weigh each axle and consult the Tyre manufacturers data.	
21	Ducato. The heated rear screen button activates the heated wing mirrors.	
22	Ducato. The filler tube on the washer bottle extends. Special filler funnel available from Moho-bits.	
23	In an emergency it is possible to connect the leisure battery to the vehicle battery using jump leads, to start the engine. Ducatos can suffer from bad earths. This can manifest itself with poor starting (amongst many other things). Fix a jump lead to	
	the negative on the battery to a new earth point on the body. If this fixes the problem fit a new earth strap.	
25	A lot of recovery companies have a 3.5t limit. Heavier vehicles will need special consideration.	
Camping		
1	Don't camp under trees (sap, rain, nuts, falling branches, lightening).	
2	Never camp in service areas. Especially in Europe. A magnet for dodgy characters.	
3	Never leave your awning out unattended (a gust of wind can be very costly).	
5	Secluded camping - leave a big dog bowl outside the hab door. Never empty your toilet down a 'manhole'. Some are surface water only and go to the nearest water course.	
6	Soft ground requires boards to spread the load. This stops the tyres from sinking.	
7	Take a 2kw fan heater in winter as backup in case your boiler packs up.	
9.	Respect peoples space. Don't park right next to someone if there are other places to camp. There is no good time to use a generator if you are near other campers!	
10.	Leave the place cleaner than when you found it. Leave no trace.	
11.	Fill up your tank with water as soon as you get on a site. It is easy to forget and set up camp before you realise!	
12.	Off-Grid Camping. Never outstay your welcome. After a day or so give someone else a chance. Arrive late and leave early. Don't give the impression that you are taking over by scattering your stuff all over the place and erecting perimeter fences.	
13.	Never drain grey water in a public area – it's illegal. If you wouldn't drain it onto your drive, don't drain it onto	
14.	the land. Even though it is only soapy water, the public don't know this and could be suspicious and alarmed. Always spend your first night camped near the dealers (not far to go if something goes wrong or you've forgotten something).	
15.	Write-up all your trips in a travel diary (it helps you remember back to that 'special' camp/place).	
Habitation	If the water isn't draining away from the sink, tamp the plug hole with your hand (this shifts any airlock)	
Habitation 1 2	If the water isn't draining away from the sink, tamp the plug hole with your hand (this shifts any airlock) Always turn the pump off when away from the vehicle (if a leak occurs the pump will not stop pumping until the tank is empty)	
1 2 3	Always turn the pump off when away from the vehicle (if a leak occurs the pump will not stop pumping until the tank is empty) Never leave any phones etc on charge while you are out (fire hazard).	
1 2 3 4	Always turn the pump off when away from the vehicle (if a leak occurs the pump will not stop pumping until the tank is empty) Never leave any phones etc on charge while you are out (fire hazard). Bad egg smell inside can be either waste tank smell or cooked habitation battery. A musty smell indicates damp
